

The Game Education Matrix (GEM) Beta

Facilitating Pathways in Post-Secondary Games Education

Jason Hawreliak (Brock University)

Andrew Hogue (UOIT)

Presentation Agenda

1. Description and Purpose of the GEM
2. Conceptual and Theoretical Underpinnings
3. How GEM Works (input and output)
4. Goals of the Beta
5. Beta Updates
6. Articulation Wizard (Andrew)
7. Challenges and Limitations

What is the GEM?

- The Game Education Matrix was designed by Jean Bridge (Brock) and a multi-institutional team to help facilitate student transfer and articulation agreements among games programs in Ontario.
- Through an online tool, users provide data for their program and core courses by selecting from a pre-defined database of competencies and Learning Outcomes (LOs) related to games education.

Logged in as
[Brock User](#)
[LOGOUT](#)

[LEARNING OUTCOMES](#)[CURRICULUM](#)[WIZARD](#)[MY INSTITUTION](#)

The Game Education Matrix enables Ontario Colleges and Universities to compare game-related programs for the purpose of developing new transfer pathways. Participating institutions demonstrate the emphasis, specialization and depth of their programs through the identification of the competencies and learning outcomes. This information supports more seamless transfer for students.

MORE ABOUT THE GEM TOOL

Participating Institutions

Why GEM?

- There are roughly 30* games and interactive media programs in the province, each with their own specializations (e.g. programming, 3D modelling, animation, design).
- How do we get them to “talk” to each other?

The problem

Programs make and study games

Making Games requires

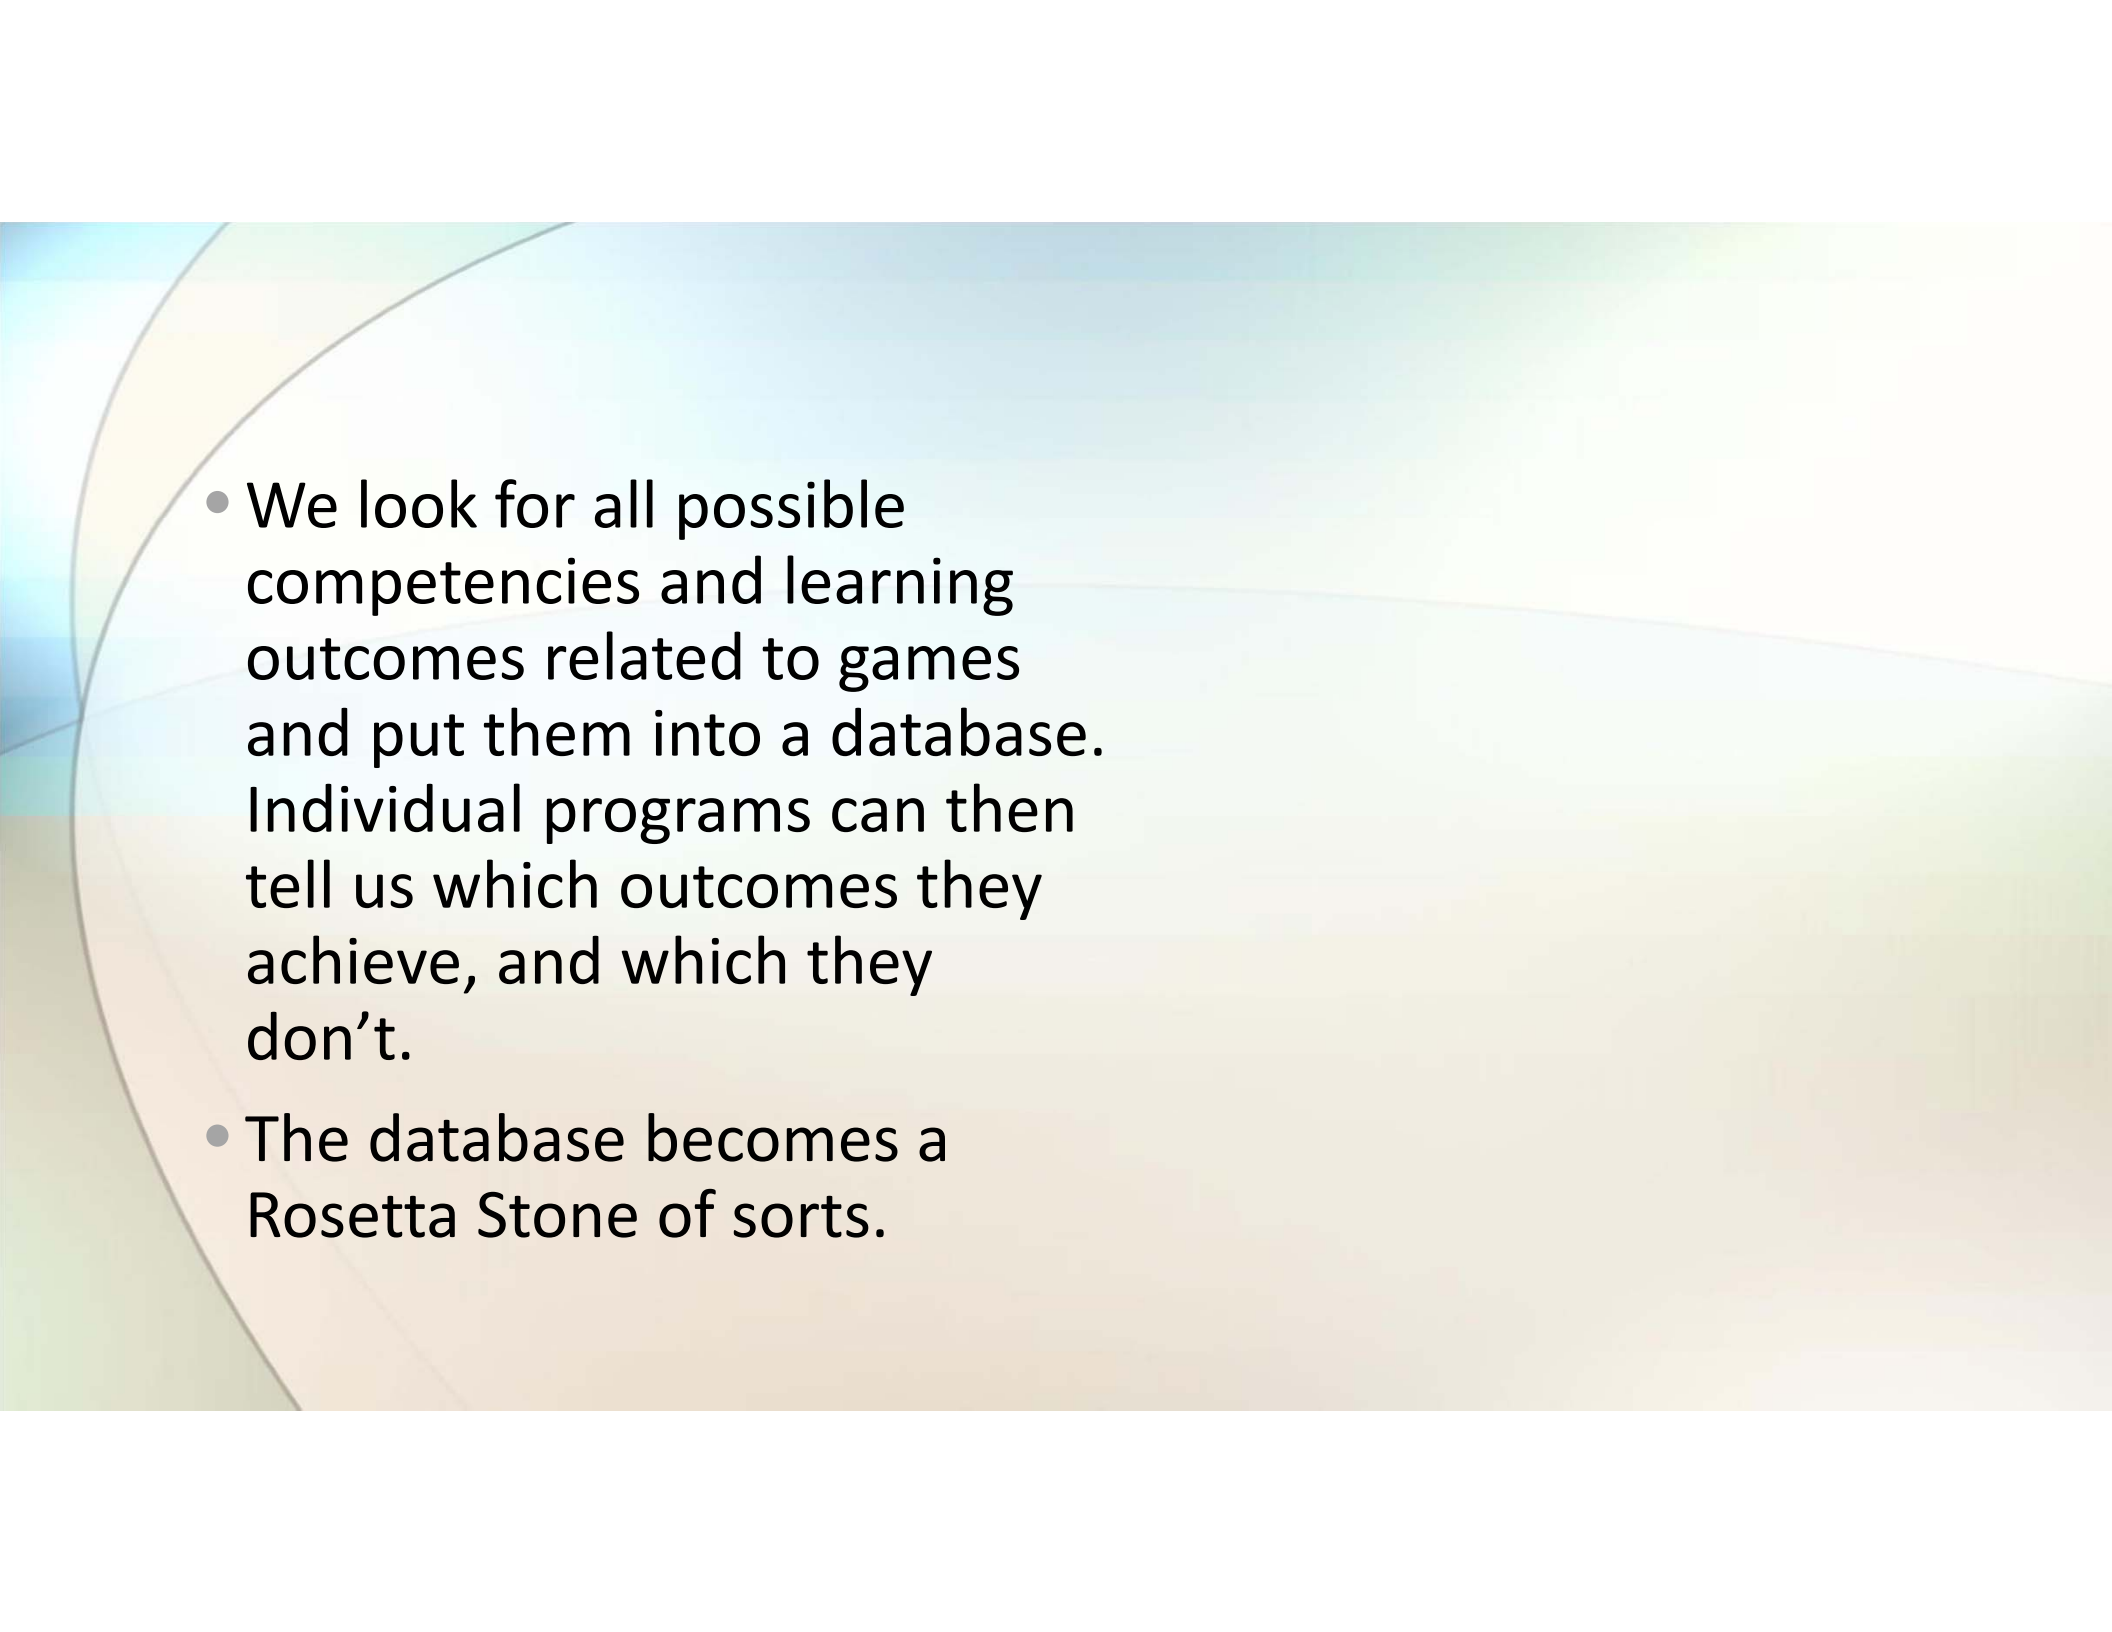

- Art
- Sound
- Narrative
- Programming
- Design
- Project management
- Documentation

Studying Games requires

- History
- Ludology
- Critical theory
- Rhetoric
- Semiotics
- Gender studies
- Aesthetics

To make matters worse, each program uses its own **language** to describe its outcomes.

How do we handle this
diversity in terms of **transfer**
when each program is unique?

- 
- We look for all possible competencies and learning outcomes related to games and put them into a database. Individual programs can then tell us which outcomes they achieve, and which they don't.
 - The database becomes a Rosetta Stone of sorts.

Some Conceptual Underpinnings

- Learning Outcome Statements (Bologna Process; Fitzgibbon, 2014). Credits can be transferred based on shared LOs rather than instructional hours or other metrics.
- Competency Tuning: a “faculty-led process to develop common frameworks for disciplinary fields” (GEM Prototype Final Report, 2014).
- Taxonomies, especially Biggs’ SOLO (Structure of Observed Learning Outcomes) Taxonomy, which tracks the progression of learning from simple to increasingly complex/abstract.

The Matrix

Through consultations with faculty and industry, the GEM team discovered **5 core Disciplines**: Design, Production, Content, Programming, Scholarship, plus Literacies

The Matrix

Each **Discipline** contains a number of competencies related to it. For instance, within the **Design** competency, there is Game Design, Experience Design, and Concept Design

Gameplay Mechanics

The Matrix

Each **Competency** contains **Learning Outcomes** related to it according to 4 levels of complexity. The program must fulfill a certain number of LOs to move on to the next level.

4 Levels of Competency

1. Discuss/Use (definitions, vocabulary, exploration...)
2. Organize (manipulate, differentiate, contextualize...)
3. Mobilize/Create (formulate, assess, correct...)
4. Originate/Judge (invent, propose, expand, systematize...)

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q
LEVEL 3	MOBILIZE/ CREATE CONSIDERING COMPLEX RELATIONS															
	FORMULATE, DEVELOP, RELATE, LEVERAGE, COMBINE, REVIEW, REFLECT, ASSESS, REFINE, CLARIFY, ITERATE, BALANCE, OPTIMIZE, CORRECT, SOLVE , PLAN, SELECT, DOCUMENT, IMPLEMENT, ESTABLISH, COLLABORATE, CRITIQUE, TRANSFER, COORDINATE, NEGOTIATE															
	conceptualize				methodology/iteration/solution				feedback/criticism				performance deliverables			
DESIGN																
Game Design	Relates concepts and requirements for art, narrative, and user experience from assignment and/or documentation to				Assesses and iterates on a game design to optimize balance and consistency.				Combines feedback from testing, observations and critique to solve problems with game design.				Collaborates to create a functioning digital game in a creative group project based on documented requirements.			
Experiences Design	Relates concepts and creative requirements from assignment and/or documentation to formulate experience design.				Assesses and iterates on an experience design to optimize creative and functional coherence.				Combines feedback from testing, observations and critique to solve problems with experience design.				Collaborates to create a functioning user experience in a creative group project based on documented requirements.			
Concept Design	Relates concepts and requirements for art, narrative, and user experience from assignments and/or documentation to				Assesses and iterates on a character and prop design through digital painting, sculpture and/or motion capture to				Combines feedback from testing, observations and critique to solve problems in concept design.				Refines character and prop concepts through research and diverse creative techniques based on documented			
Environment/Level Design	Relates concepts and requirements for art, narrative, and user experience from assignments and/or documentation to				Assesses and iterates on an environment design using Assesses and iterates level design to optimize balance,				Combines feedback from testing, observations and critique to solve problems with environment and level design.				Refines complex environments and balanced level designs through research and diverse creative techniques based on			
Narrative/Storytelling	Relates concepts and requirements for art, design, and user experience from assignment and/or documentation to				Assesses and iterates on back story, character and environment development, level design, dialogue and				Combines feedback from play testing, observations and critique to solve problems with narrative comprehension.				Collaborates to create an interactive narrative experience Refines story concept for a multi-level game through			
Gameplay Mechanics	Relates concepts and requirements for design, art and narrative from assignment and/or documentation to formulate				Assesses and iterates on gameplay mechanics through tool optimization and/or testing.				Combines feedback from testing, observations and critique to solve problems with gameplay mechanics.				Collaborates to create functioning system of gameplay mechanics in a creative group project based on documented			
PRODUCTION																
Documentation	Relates concepts and requirements of design, art, narrative and detailed production goals, etc. from assignment and/or				Assesses and iterates on project documentation and documentation methods/tools during project production				Combines feedback from observation, consultation with project team/others and requests for input to ensure clear,				Collaborates in creative group project to conceive and refine project documentation that synthesizes concepts,			
Production Process	Relates concepts and requirements of multiple workflows and production pipeline from assignment and/or self- or group-				Assesses and iterates on production scope, process, management and peer assessment during project				Combines feedback from observation, consultation/collaboration with project team/others to solve				Collaborates in creative group project to conceive, refine and document production processes and management strategies			
Production Tools	Relates features of diverse production tools and requirements from assignment and/or documentation to formulate and				Assesses production tools during project production cycle to ensure optimal pipeline efficiency.				Combines feedback from observation, consultation with project team/others and requests for input to identify and				Collaborates in creative group project to conceive, refine and Plans and documents procedures the use of game engine in			
Prototyping	Relates concepts and requirements for animations, mechanics and interfaces from assignment and/or				Assesses and iterates on prototypes during project production cycle through testing against clear and/or				Combines feedback from observation, consultation with project team/others and requests for input to identify				Collaborates in creative group project to conceive, refine and document prototyping strategies to support the production of			
Organizational Behaviour	Relates concepts and requirements from assignment and/or documentation to formulate organizational plan with decision				Assesses and iterates on team dynamics and norms during project production cycle to ensure optimal communication				Combines feedback from observation, consultation with project team/others and requests for input to identify and				Collaborates in creative group project to conceive, refine and document organizational strategies to support the production			

DISCUSS/USE - DESIGN - GAME DESIGN

Please select which LOs apply to your program.

☐

I. Defines key concepts, vocabulary and frames of reference to participate in meaningful discussion about digital media/game design.

☐

II. Identifies and explores primary topics and precedents in game design through case studies, readings and standard texts.

☐

III. Adopts paper or multimedia techniques to prototype ideas.

☐

IV. Derives board games and other paper-based game experiments from idea brainstorming and/or research.

This program does not address this competency.

Goals of the Beta Phase

Goals of the Beta Phase

1. Better understand the audience and field (consult)
2. Cut down on the sheer amount of LOs (responsibly)
3. Make the profiling process more user-friendly
4. Expand the pool of profiled programs
5. Add functionality (automation, output reports)
6. Develop 2 articulation agreements

Who are the end users of the GEM?

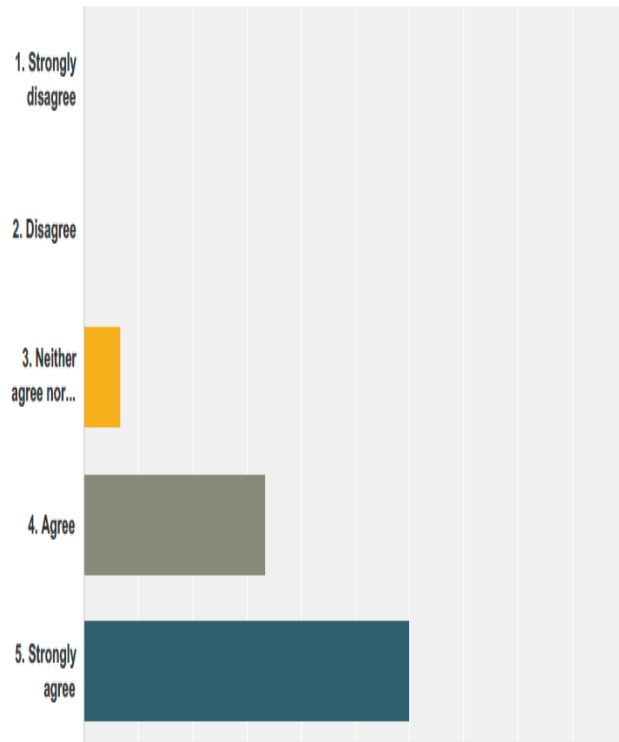

1. Faculty. Most articulation agreements and transfer protocols start with faculty (depending on institution).
2. Registrars and admissions personnel. They want easy to read data on the exiting program. Transfer tends to happen on an ad-hoc, case-by-case basis.
3. Students (eventually). The GEM could aid students looking at transfer options.

What does the industry want (n=15)?

- A credential
(university slightly preferred to college)
- A portfolio
- Strong communication and interpersonal skills

Q16 On a scale of 1 (Strongly Disagree) to 5 (Strongly Agree), how well does the following statement describe you: “I believe soft skills are equally as important as technical skills”

Answered: 15 Skipped: 0

Q17 On a scale of 1 (Not Important) to 5 (Very Important), please rate how important you find **EFFECTIVE COMMUNICATION WITH COLLEAGUES, MANAGERS AND DEPARTMENT HEADS** to be when assessing job applicants based on their resume or during the interview process.

Answered: 15 Skipped: 0

Beta Updates (Apr. 2016 - Feb. 2018)

- The project team consists of members from 6 institutions: Algonquin College, Brock University, Durham College, Niagara College, UOIT, York University
- We mostly kept the conceptual framework with a few tweaks
- We cut down on the LOs based on redundancy and competencies not profiled in the Prototype phase (e.g. Rhetoric)
- Consulted with a UX/UI professor to improve the UX
- We doubled the pool of profiled programs (agreed)
- Added new functionality, e.g. the Articulation Wizard

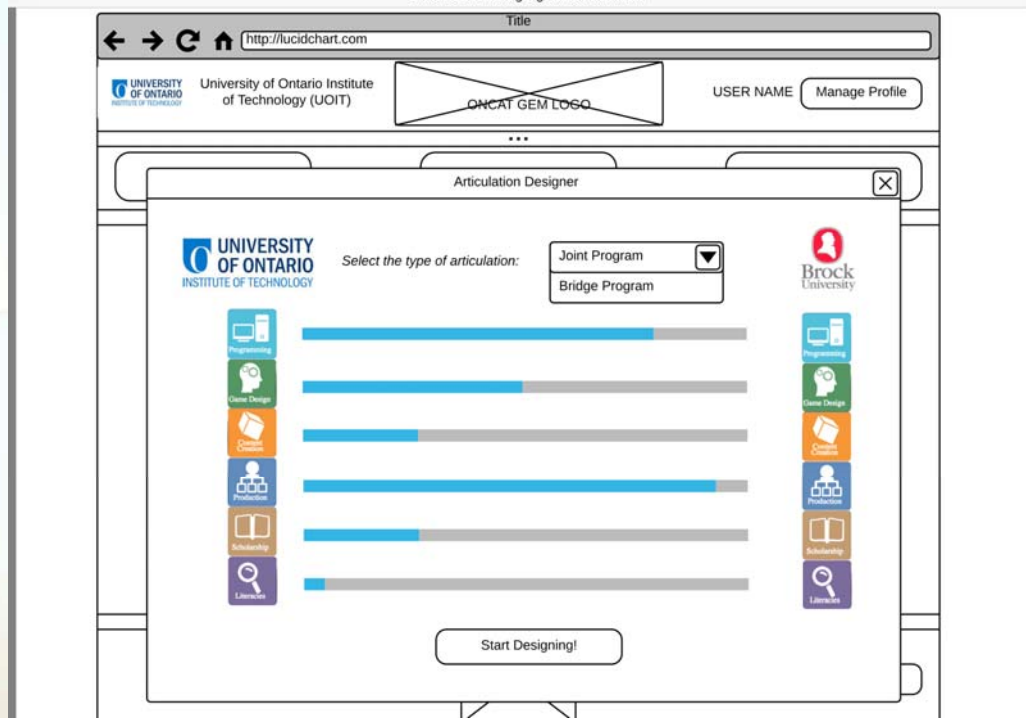

GEM Wizard

Problem

- Program directors have a hard time understanding how students from another institution should integrate into their program
- GEM helps by mapping each program through learning outcomes (LOs).
- How do we use these LOs practically?

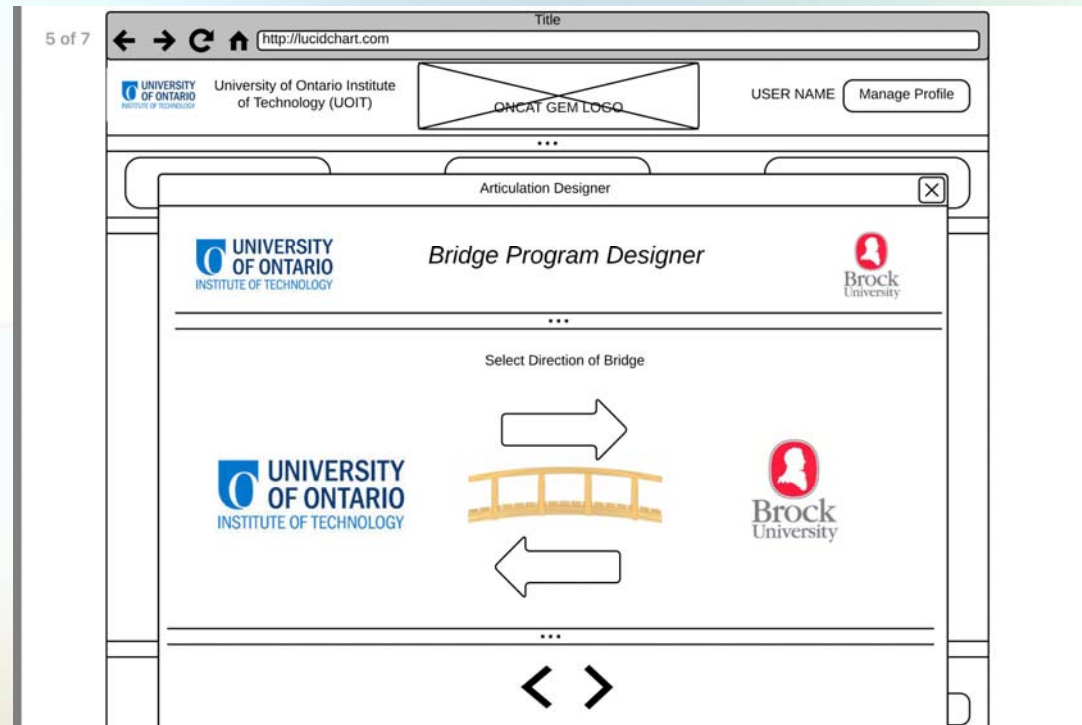

Design of a wizard

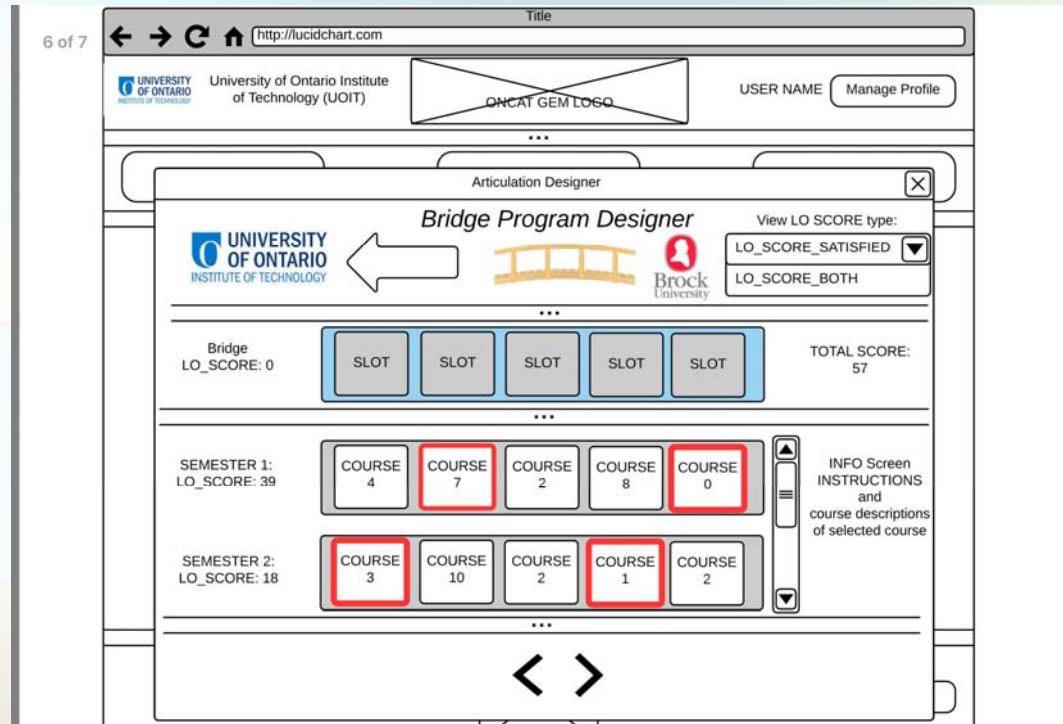

What if we could visualize how the LOs from two programs map to each other?

We could see if the programs are compatible and identify "holes" that need to be filled

Imagine a simple interface like a wizard that guides program directors through the creation of a bridge

Using the LO data from GEM

Imagine an interface that lets you drag and drop courses to create a program map

Allows for easy use and maintenance of individualized program maps for bridge students

Bridge LO_SCORE: 0

SLOT SLOT SLOT

each semester and bridge has 5 slots that can be filled

TOTAL SCORE 57

SEMESTER 1:
LO_SCORE: 39

COURSE 4 COURSE 7 COURSE 3 COURSE 0

SEMESTER 2:
LO_SCORE: 18

COURSE 2 COURSE 10 COURSE 2 COURSE 1 COURSE 2

courses highlighted are the ones in list: COURSE_SATISFIED

INFO Screen INSTRUCTIONS and course descriptions of selected course

USER is able to drag and drop each course to different semesters and into the bridge to re-order them

Total score is the sum of the score selected over the entire program bridge + all semesters

LO_SCORE is the number of LOs satisfied by the students exiting program

Lower # means better candidate for inclusion
Higher # means student has already satisfied many LOs

Select 2 programs to see how they map at a high level across disciplines

For this example I have selected a student who has completed DC's game dev program and is entering UOIT's game dev program

The final individualized bridge program

Can be emailed and saved for later editing

Wizard thoughts

- Gives program directors the data needed to make decisions on course removal based on LEARNING OUTCOMES rather than course names
- Removes ambiguity
- If a course is removed that still has remaining LOs, e.g. DC Course has satisfied 20/25 LOs of a UOIT course you can identify WHICH LOs.
- Opportunity to create individualized online modules for the student to take.

Still just an idea...

- Curriculum maps are a pain to complete.
- The GEM can be a pain to complete.
- What if we could use GEM data to generate curriculum maps based on provincial standards (e.g. DLEs)?
- We've developed a proof of concept but it's still in the early stages.

Challenges and Limitations of the GEM

- A model based on LOs is inherently limiting.
- A tool requires rigid quantification; learning is messier than that.
- Methods and standards of assessment vary.
- Profiler reliability.
- The tool requires a lot of time and monotonous work.

Thank you!
